**Important Information for Hendrickson Customers:**

**Wheel-End & Hub Options:** Any lift axle and suspension system's weight rating is limited by the lowest rating of any constituent component installed into or onto that system. The tire and rim specifications, orientation and load location can also affect the rating of the hubs and hence the axle and suspension system rating as a whole. It is the installer's responsibility to ensure that the axle and suspension system rating (which may be reduced, as indicated above) is not exceeded. Failure to do this can result in damage to the axle and suspension system. A particular concern is the possible "de-rating" of suspension capacity when using offset (dished-out or dished-in) wheels, a situation that can put an excessive load on the bearings and spindle, which can lead to reduced service life and mechanical failures. When utilizing hubs, wheels or bearings not supplied by or recommended by Hendrickson or when replacing Hendrickson-supplied hubs and/or bearings with components not supplied by Hendrickson, it is the buyer's responsibility to consult with the suppliers of those components and all associated supplier literature to assure that the rated capacity of the axle and suspension system or its sub-assemblies will not be exceeded.

**Hendrickson Customer Service:** If you have questions about this Ordering Guide or the **EXF NON-STEER Lift Axles** for TRUCK applications, please contact Hendrickson Technical Services by phone 800.660.2829 or e-mail: [liftaxletech@hendrickson-intl.com](mailto:liftaxletech@hendrickson-intl.com).

**Hendrickson Genuine Parts:** For long service life and optimal performance, use only **Hendrickson Genuine Parts** when servicing your lift-axle suspensions system.
