- Optimized ride quality
- Optimized road stability
- Optimized durability

Nothing is quite like the original
Visually, a part may look compatible; however, the inner working parts of Hendrickson shocks distinguish us from non-genuine shocks. Our shocks feature a solid inner metal bushing to withstand our high torque level requirements. Using our tough torque requirements on the mounting bolt of a non-genuine product could result in collapsed shocks.

Don’t be fooled by imposters
Shocks require the same stroke to keep your trailer functioning properly. Using a non-genuine shock with too short of a stroke can damage mounting clevises or the trailer’s cross members. Too long of a stroke can overextend suspension air springs. Using Hendrickson Genuine shocks can prolong the life of other integral suspension components and help reduce costly repairs.

Protect your investment
Hendrickson Genuine Parts work in unison to provide superior performance and enhanced system life. Why diminish the value of your trailer with non-genuine components? Hendrickson Genuine Parts give you peace of mind knowing your replacement part fits and functions to maintain your system’s overall performance.
