- Exceptional durability
- Versatile applications
- Outstanding mobility

To learn more about RT / RTE, call 855.743.3733 or visit www.hendrickson-intl.com
Enhanced Design for Superior Durability, Stability and Off-road Maneuverability

**Hendrickson Rods**
- Improve cornering by controlling lateral forces
- Optional transverse rods ensure maximum lateral axle control and straight line suspension stability
- Longitudinal rods engineered to optimize resistance to wind up during acceleration and braking

**Spring Pack**
- Genuine Hendrickson springs are made from high-strength steel
- Heat treated and shot peened for exceptional fatigue life

**Equalizing Beam**
- Distributes load equally between both axles for improved maneuverability, stability and handling
- Lowers the center of gravity to increase stability
- Establishes a solid axle connection for improved handling

**No. 1 Spring Hanger**
- Helps absorb the forces of braking and acceleration, while providing longer hanger and spring eye bushing life

**Radical Leaf Rods**
- Improve cornering by controlling lateral forces
- Optional transverse rods ensure maximum lateral axle control and straight line suspension stability
- Longitudinal rods engineered to optimize resistance to wind up during acceleration and braking

**No. 3 Spring Hanger**
- Serves as the primary load point for the lengthened RTE spring pack in unloaded conditions

**Saddle**
- Engineered to increase durability without adding weight
- High stress concentration areas such as chair back and legs are fortified for strength and durability

**Extended Leaves**
- Extended leaf spring design of the RTE provides a smooth, comfortable ride when empty or lightly loaded

**Bar Pin End Connection**
- Rugged axle connection extends bushing life and allows easy axle alignment and serviceability

**No. 2 Spring Hanger**
- Cam and leg areas receive a special flame hardening treatment that increases durability and extends life

RTE shown above.
RT shown on front cover.
Better ride when you’re traveling light — Better handling when you’re fully loaded

The extended leaf spring design of the RTE suspension provides a smoother, more comfortable ride when empty or lightly loaded and uncompromised stability when fully loaded.

**Here’s how it works...**

- The upper leaves of the RTE extend past the No. 2 spring hanger to the No. 3 hanger. In the empty or lightly loaded condition (Figure 1), the extended spring leaves do not make contact with the No. 2 hanger. The resulting longer effective spring length produces a softer ride for greater driver comfort and equipment protection.

- When load is added, the extended leaves deflect and make contact with the No. 2 hanger (Figure 2). This shortens the effective spring length to match that of the RT spring assembly for a more stable ride.
Hendrickson Genuine Parts are the same quality components installed in Hendrickson original equipment suspensions — consisting of the same design, construction, performance and durability. There’s only one way to maintain and protect your suspension’s original performance. Ask for the name that is synonymous with the finest manufactured suspensions in the world.

Call your truck dealer or Hendrickson at 630.910.2800 or 855.RIDERED (743.3733) for additional information.

1. Contact Hendrickson for availability of additional capacities and axle spacing.
2. Installed weight includes complete suspension, torque rods, axle brackets and frame brackets at 54 inch axle spacing. Capacities over 65K vary, contact Hendrickson engineering for more information.
3. Contact Hendrickson for applications that may exceed Gross Vehicle Weight approval rating.
4. Site Travel Rating – operations using vehicles equipped with liftable pusher or tag axles must not exceed published ratings. Ratings are limited to no more than five percent of vehicle operation at a speed not to exceed five mph. Liftable pusher or tag axles should only be raised (or unloaded) to improve vehicle maneuverability in off-road use or when vehicle is empty. Site ratings are consistent with published axle manufacturer’s limitations. Axle and suspension site travel specifications must not be exceeded.
5. Transverse rods are standard with axle spacing of 60 inches or more and on 46,000 to 70,000 pound capacity suspensions with rubber center bushings, refer to Hendrickson publication 59310-004 and 59310-058 for more information.
6. Heavy-duty equalizing beam option available at 46,000 pound capacity.

Aftermarket shock absorbers available, contact Hendrickson for details.
