AIRTEK® delivers driver and passenger comfort, outstanding stability and extended vehicle life all in one package.

A Freightliner Custom Chassis bus chassis equipped with Hendrickson’s AIRTEK integrated front air suspension and steer axle system combines simple, functional design and state-of-the-art technology for superior ride, stability and handling. The same smooth, comfortable ride that cradles passengers and drivers reduces vibration-induced wear-and-tear to help extend overall vehicle and component life.

For additional information, call 630.910.2800 or visit our web site at www.hendrickson-intl.com
**AIRTEK®** — The industry’s first integrated front air suspension and steer axle system improves performance and efficiency, delivering superior handling and driver confidence. Together, Freightliner Custom Chassis Corporation and Hendrickson have optimized the AIRTEK system for bus applications.

### Proven Durability

- Tested and proven in heavy-duty applications
- **STEERTEK NXT Axle** — The box-shaped cross section resists horizontal, vertical and twisting forces more effectively than traditional I-beam axles. Continuous beam architecture minimizes stress points for added durability. Unique, robotically welded axle design reduces weight while maintaining superior durability.

### Extended Vehicle Life

- **Spring and rear shackle bushings** — heavy-duty design for durability and maintenance-free operation
- **Two-piece knuckle assembly** — allows for easy disassembly of knuckle without removing kingpin

### Driver and Passenger Comfort

- **High volume air springs** — support the vertical load and help produce a softer, more comfortable ride

### Outstanding Stability and Handling

- **Leaf spring assembly** — forms a torsion system with the box section axle to increase roll stability
- **Optimized steering system performance** — delivers an industry leading wheel cut of up to 55 degrees resulting in a tighter turning radius and superior maneuverability
