

Hendrickson Air Springs are integral parts of our truck and tractor air suspensions, providing driver comfort and optimal performance. Regular suspension inspections are necessary to help ensure maximum ride quality and handling. To help ensure high end-user satisfaction and optimal system performance, Hendrickson supplies the same genuine components for service as those installed in the original suspensions — with the same design, construction, performance and durability.

■ **Engineered**

Hendrickson air springs are designed and tuned specifically for each of our suspension system models and approved applications. Hendrickson air springs undergo advanced design and testing processes to provide optimal suspension ride, handling and performance.

■ **Performance**

Ride quality and performance are key factors when designing the internal makeup of Hendrickson air springs. A low natural frequency is achieved through proprietary piston, flex member, and bump stop components.

■ **Use Only Genuine Hendrickson**

Using non-genuine air springs can alter the weight rating and performance of Hendrickson suspensions. Look for the Hendrickson name and logo on the air spring to help guarantee you are getting genuine Hendrickson service parts.
